## PHOTOGRAPHIC STUDIES OF GUIDELINE MISSILES

25X6 This brief, in answer to two CIA/ORR requirements, presents the  
results of photographic studies made by the Foreign Technology Division  
(FTD) of the Air Force Systems Command, Wright-Patterson Air Force  
Base, Dayton, Ohio. One requirement (RR/E/R30/61) requests determina-  
tion of whether the Guideline missile photographed at the SA-2 SAM launch  
site [REDACTED] has a nose probe. From examination  
25X1 of the [REDACTED] photography (dated 16 June 1961), the presence or absence  
of a nose probe on this missile could not be determined.

The second requirement (RR/E/R31/61) asks for a comparison of the  
Guideline missiles photographed at parades in Budapest (May 1960), and  
Prague (1961) and Moscow (7 November 1957). In response, Figure 1,  
which presents three sketches based on FTD drawings, illustrates this  
comparison.
